## ID LOGISTICS INAUGURATES ITS SITE DEDICATED TO THE DISTRIBUTION OF SIGNIFY PRODUCTS, THE WORLD LEADER IN LIGHTING

ID Logistics, an international leader in contract logistics, has been chosen by global lighting leader Signify to manage the receipt, preparation and shipment of all the brand's products, within the new 30,000 m<sup>2</sup> distribution center in Plessis-Pâté (91).

This new logistics platform has five cells of 6,000 m<sup>2</sup> each in which ID Logistics manages the distribution of all Signify products, formerly Philips Lighting<sup>1</sup>, to France, Spain, Portugal and Italy. More than 20,000 parcels per day are handled by 140 employees, via two distribution channels, BtoB and BtoC: mass distribution, construction sites, end customers, etc.

Signify, owner of a historic building in Villeneuve-Saint-Georges, has decided to outsource the activities of its distribution center by completely overhauling its processes and working methods and opening a new, more modern and efficient site.

### ID LOGISTICS OFFERS EFFICIENT TECHNICAL AND SOCIAL SOLUTIONS

ID Logistics was selected by meeting all the challenges requested by Signify. In particular, Signify wanted a full takeover of the employees working at its historic site.

In this brand-new distribution center ramped up in 2022, ID Logistics has focused on cost optimization through the implementation of a flexible and efficient process backed by technologies to guarantee tracking and quality of operations. The objectives are :

- **The safety and security of employees:** ID Logistics has notably implemented Ergolift technology, an assembly table that goes up and down during the preparation of packages in order to avoid uncomfortable positions for employees. ID Logistics has set up adapted training to limit the arduousness and guarantee the safety of staff.
- **Efficiency in order picking:** the addition of technologies such as the **pick-to-light trolley** and its set of indicator lights that indicate to the operator where and in what quantity the products must be deposited in each package in order to make the quality of the preparations more reliable. **Video tracking**, meanwhile, makes it possible to trace each preparation in the event of a customer complaint thanks to the recording of the preparation by a robot. **Touch screens** also make it possible to make fast and digitized Short Interval Animation (AIC) sessions on site, and thus standardize managerial practices by involving field actors in a desire for continuous improvement. Finally, **Smart Lockers**, or storage lockers with disinfection of portable equipment, ensure the cleanliness and traceability of the equipment provided to employees for logistics operations.
- **A building with environmental commitments:** the BREEAM Very Good certified building meets the latest environmental standards, targeting the safety and well-being of employees (separation of flows, reinforced lighting at pedestrian access, wheel wedge system controlled by the operation of the platforms) as well as energy performance (reinforced insulation, solar thermal water heater, green roof of offices). The building is fully equipped with Signify Gentlespace LED lighting fixtures providing excellent light quality, high energy performance and connected to the Interact pro system. Through better management, diagnostics and maintenance, the Interact system helps reduce lighting costs and improve operational efficiency.
