ID LOGISTICS BOOSTS INNOVATION OF ITS GLOBAL PARTNERS AS PART OF THE SIX CHALLENGE

ID Logistics, a leading group in contract logistics in France and abroad, launched the SIX Challenge (Suppliers' Innovation Xperience) last January with 850 of its global service partners. The objective was to highlight their ability to innovate and provide solutions to the entire supply chain ecosystem.

ID LOGISTICS' PARTNERS AT THE HEART OF INNOVATION

At ID Logistics, innovation is an integral part of the Group's DNA. Challenges, competitions and events have followed one another since the creation of the Group. In 2021, for example, the Roboost program aimed to study, test and implement robotic solutions at the Group's sites. In 2023, The Factory, an internal competition, rewarded the Group's managers who designed and developed innovations that address complex operational issues.

At the beginning of 2024, ID Logistics continued its momentum and launched the SIX Challenge (Suppliers' Innovation Xperience) with its global partners. This project was born from ID Logistics' desire to promote innovation at the heart of its partner and customer ecosystem. In January 2024, the logistics company launched a call for projects with more than 850 partners and service providers identified in the Group's 18 countries. More than 100 projects have been selected to participate in the final phases in each of the Group's countries. After some selection phases, national juries, made up of more than 100 ID Logistics customers, have chosen winners per country.

The innovations presented highlight 4 innovation trends in the logistics professions:

- **Robotics:** it represents nearly 30% of the projects presented with new incremental or disruptive concepts;
- **Computer vision:** the flagship applications of this technology optimize the productivity, quality and safety of people and goods;
- **Artificial intelligence** and in particular generative AI: a new entrant in the trends with decision-making tools;
- **Digital twins:** the first real-world applications in warehouses analyze the past and monitor the present to improve future operational efficiency.

INNOVATIONS THAT MEET THE NEEDS OF ID LOGISTICS CUSTOMERS

The juries were made up of more than 100 ID Logistics customers from all sectors of activity (e-commerce, retail, perfumes & cosmetics, FMCG, fashion, industry,...). In each of the Group's countries, they have chosen the winners for the 4 categories selected (Warehouse, Automation, Green & Human Centric, Transport).

In France, the winners of the categories are:

- **Hub One**, in the **Warehouse** category, thanks to a digital twin solution that analyzes the past and visualizes warehouse activity in real-time.
- **Dexory**, in the **Automation** category, with the ASTRID solution, a pallet inventory robot that will soon integrate a picking inventory solution.
- **Adequate**, in the **Green & human centric** category, through the Flex ID solution, an agile and participatory planning that takes into account individual preferences without compromising on operational efficiency.
- **Neo Trucks**, in the **Transport** category, with a 100% electric "off-road" reconditioned truck.
- **Paprec**, in the category **Green & Human centric**, presenting a system of intelligent cameras that visualizes the filling of waste bins and optimizes collection.

The company **Dexory** (Automation category), for the evolution of its ASTRID solution, an autonomous pallet rack inventory robot, soon to be equipped with a picking inventory solution, won first place in the grand jury. This innovation will join the international grand final of the SIX Challenge in October, which brings together the 18 countries of the ID Logistics Group.

NEW EMULATION FOR THE BENEFIT OF THE GROUP AND ITS PARTNERS

This first edition of the SIX Challenge demonstrates the value of such an approach in bringing out innovations that meet the needs of customers, by involving them directly in the project selection process. The Suppliers' Innovation Xperience was conducted with ID Logistics partners to ensure rapid implementation and deployment, both nationally and internationally across the ID Logistics Group. It captures the evolution of technological trends and the expectations of the market.

ABOUT ID LOGISTICS:

ID Logistics, managed by Eric Hémar, is an international contract logistics group with revenues of €2.75 billion in 2023. ID Logistics manages nearly 400 sites in 18 countries, representing more than 8 million sq.m. operated in Europe, America, Asia and Africa, with 38,000 employees.

With a customer portfolio balanced between retail, e-commerce and consumer goods, ID Logistics is characterized by offers involving a high level of technology. Since its creation in 2001, the Group has developed a social and environmental approach through a number of original projects and is now firmly committed to an ambitious CSR policy. ID Logistics shares are listed on the Euronext regulated market in Paris and are included in the SBF 120 index (ISIN code: FR0010929125, Mnemo: IDL).
