

ID Logistics rolls out a-SIS VIEW for Nespresso, the new 3D hypervision solution developed by a-SIS

Cavaillon, 30 March 2015 – ID Logistics has implemented a-SIS VIEW at the very first warehouse to be equipped with this 3D hypervision solution. a-SIS VIEW is developed by a-SIS, a provider of software solutions and the IT subsidiary of the Legris Industries group's Savoye division. Nespresso is the first to benefit from this solution rolled out by ID Logistics.

Innovation—a constant point of emphasis for ID Logistics achieved through collaboration

Long-time partners ID Logistics and a-SIS decided to deploy this breakthrough solution that ushers in a new generation of connected logistics sites, delivering a major step forward in the supervision of supply chain activities. This project fits perfectly with Nespresso's strategy to harness logistics services in pursuit of operational excellence.

Commenting on this groundbreaking solution, Ludovic Lamaud, Executive Vice President, Development and Innovation, said: *"At ID Logistics, innovation has been an integral part of what we do ever since the business was founded. As part of the quest to find innovative solutions for our customers, every year we develop more than 15 projects out of around 50 in our portfolio, while continuing to foster a collaborative approach with partners in our innovation ecosystem. Forging link-ups and partnerships helps us to combine our respective expertise to develop pertinent and pioneering solutions for the benefit of our customers."*

a-SIS VIEW, a unique hypervision solution designed for the logistics arena

The innovative a-SIS VIEW tool displays every item in the connected warehouse. It holds all the data centrally and can display all activities in 3D, allowing it to supervise the entire logistics environment. It is also able to interact with systems and can launch automated devices or assign tasks to operators. It is equipped with several features that transform and facilitate site management to achieve optimum responsiveness:

- 3D and real-time display of logistics operations performed at the warehouse;
- Identification and immediate correction of any issues encountered;
- Detailed analysis of the service with the option of replaying sequences of activities from the most useful angle;
- 3D modelling to introduce the best improvements.

Geofencing is already included in the solution: operators, carts or any mobile item are geotagged for 3D display. New features are also being tested, such as shock prediction, geo-guiding and alert management.

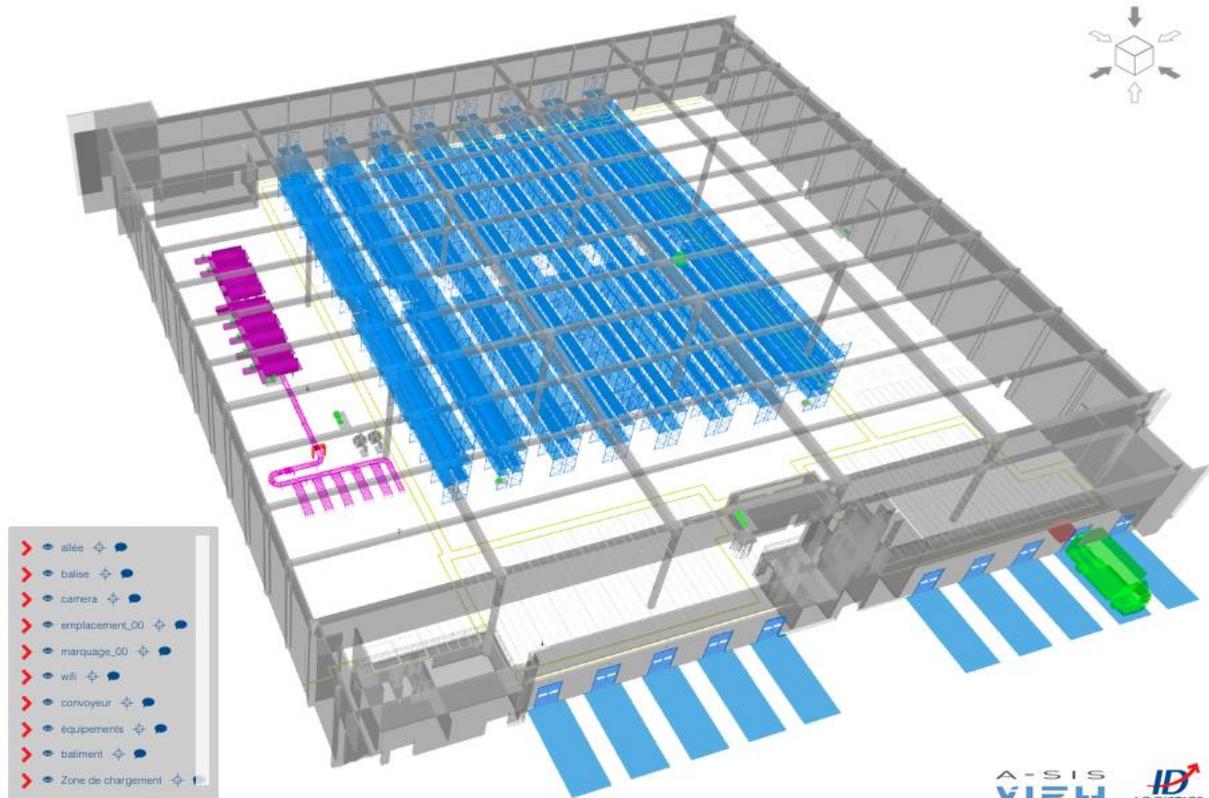

Commenting on this disruptive tool, Dominique Testa, Chief Executive Officer of a-SIS, said: *"This project carried out jointly with ID Logistics represents a genuine breakthrough in logistics management at automated*

warehouses. This helps to take logistics operations up to an industrial level, while maintaining the requisite flexibility. It is also a project geared towards protecting the safety of our people and materials.”

Nespresso, first to benefit from this differentiating and groundbreaking logistics system

The ID Logistics-operated warehouse, which is fully dedicated to Nespresso’s logistics, is piloting this new solution. The initial findings show that a-SIS VIEW facilitates site management and delivers significant improvements in both the responsiveness and agility of logistics operations. By helping to model all the site’s elements, this innovative solution will also help to plan ahead for future changes so that the logistics environment can be optimised for the benefit of B2C customers and Nespresso stores.

Martine Varieras, Director of Operations at Nespresso France, added: “We have always been firm believers that the quality of our service should match that of our products. To guarantee a unique experience for our Club members and continually adapt to the changes in our multi-channel environment, we need to be more flexible, more agile and more effective. And so we are delighted to be taking part in a project as innovative as this one, with our partner ID Logistics. It is part of our continuous improvement programme encompassing the entire scope of our activities, including the supply chain.”

ABOUT ID LOGISTICS

ID Logistics is an international contract logistics group, with revenue of €874.5 million in 2014. ID Logistics operates close to 200 sites across 14 countries, representing 3.6 million m² of warehousing facilities in Europe, Latin America, Asia and Africa, and has 13,000 employees.
